submissions:

29 February 2020

Message from the Guest Editors

Vitamin A is an essential nutrient obtained through diet, either as retinol from animal products or as provitamin A carotenoids, although mainly from plant products. The contribution of the provitamin A carotenoids depends not only on the amounts of fruits and vegetables consumed and on their proportion with respect to retinol intake from animal sources, but also on the bioavailability and capacity of conversion into retinol of the carotenoids consumed.

The evaluation of the suitability of the diet or the risk associated with excessive or inadequate vitamin A intakes are based in the assessment of nutritional status, using biochemical markers or dietary estimation. Data on nutritional status based on food intake are highly useful for decision-making in the public health setting and in the context of epidemiological studies.

Message from the Editorial Board

Nutrients is an on-line open access journal that was first published in 2009. *Nutrients* adheres to rigorous peer-review and editorial processes and publishes only high quality manuscripts that address important issues related to the impacts of nutrients on human health. The Impact Factor of *Nutrients* has risen rapidly since its establishment and it is now ranked in the first quartile of journals publishing in the field of nutrition and dietetics research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed), Scopus and other databases. Full-text available in PubMed Central.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 14.2 days after submission; acceptance to publication is undertaken in 4.4 days (median values for papers published in this journal in the second half of 2018).
